

Feature Focus: **Displays Notes Alongside File Links**

You don't use information you don't see.

Want to view file link Notes right with the link information? Tired of having to "right-click -> Edit" on each file link, one by one, to view your Notes? Did you know that GoldVisionPro displays all your link file Notes in a sort able list, right alongside all the other link information?

With the ability to automatically list all the file links throughout your entire database, GoldVisionPro helps you quickly find/launch the file link you want. Adding the Notes field view provides a valuable sorting capability for quickly finding/viewing additional information without opening a file. Plus the 64k Notes field can be used to extensively annotate information about the file that may not be in the file itself, such as:

- list of free-form materials mailed with a linked letter ("w/color brochure, key chain, 2002 mug")
- status/pricing-basis of a proposal ("10% discount in this proposal")
- details about digital pictures ("4BR, 5Bath, basement, pool, 4,000sqft, 0.5 acre")
- author and comments on a scanned document ("attorney's file copy; missing authorized signature")
- checklist of contract forms included in a multi-page single file ("loan app, appraisal, credit report")

Now, using the file links Notes field becomes a powerful part of your document – image - file management.
