

Feature Focus: Links Scanning To GoldMine

Did you know that you can store 700 scanned pages on your computer for the cost of storing 1 page in a file cabinet? That for the cost of one file cabinet of paper documents, you can store over 20 *million* pages of scanned files? And that you can scan and link a document in GoldMine in less time than it takes to put a paper document in your office file cabinet?

Along with its many file management advantages, GoldVisionPro is also "Making Paperless A Reality" by linking scanned images into your GoldMine System. Easily integrating with popular scanning applications, GoldVisionPro bridges the connection to your GoldMine database, making scan-to-link a simple, inexpensive process, even for non-GoldMine users.

GoldVisionPro lets every user scan, annotate, and link documents, even to multiple contact records in your system, even without GoldMine running. And when you combine automatic Adobe Acrobat file conversion of your scan in one-step file linking, GoldVisionPro adds yet another feature to your document management solution through GoldMine.

Remember, GoldVisionPro is *not just a solution for scanning*, it is the answer to managing ALL your files through your GoldMine System.
