

Feature Focus: Makes You A Hero

Don't miss a key aspect of GoldVisionPro. Unlike other GoldMine add-ons, GoldVisionPro does not require elaborate setup, configuration and customization. While its features are extremely useful to every client/employee, VAR's don't need a week of training just to sell service or use GoldVisionPro. It's a "no-brainer"!

When you tell your customer that you can simply "activate" a document/file management system in their current GoldMine database - now with MS Office integration - it will make you a hero. They get twice the use out of their existing system!

GoldVisionPro is a very user-friendly program that takes the "thinking" and the "technical expertise" out of using GoldMine to manage all of a company's files. From automatic naming to automatic filing to automatic retrieval, GoldVisionPro can be *easily used by everyone in an entire company, not just the GoldMine experts*. That makes the actual cost per user negligible, and that makes you a huge hero.

And when the System Administrator can easily backup/restore ALL of the company's user-created files from the network directory, then they may actually give you a medal!
